

Says

What have we heard them say?  
What can we imagine them saying?

Thinks

What are their wants, needs, hopes, and dreams?  
What other thoughts might influence their behavior?

a computer is a machine that can be programmed to carry out sequences of arithmeti or logical operations

all digital computer rely on a binary system of one and zeros and on rules of logic set out the 180s by english mathematician george boole

modern digital electronic computer can perform generic sets of operations know as programs

a broad range of industrial and consumer products use computer as control systems

capabilities they achieve outstanding tasks that a human could never perform just using zeroes and ones....

so,no computer do not use logic in the sense of a cognitive activity computers do nod think they have no main no consciousness no nothing

customers

Short summary of the persona

they are used in homes ,business ,educational ,research organizations ,medical field ,government offices etc,

a computer is a machine that can be programmed to accept data process it in useful information

computer do not have human like emotions in any rich or experiential natural sense.

computer is a data processing device that perform four major functions and storage

they may sense and label certain physical events as categories of sensations but they do nod experience feeling like we do.

deep learning in computer resembles now scientists think the human brain works.

Does

What behavior have we observed?  
What can we imagine them doing?

Feels

What are their fears, frustrations, and anxieties?  
What other feelings might influence their behavior?
